

**CORONAVIRUS SOLUTIONS
FOR
BUSINESS AND GOVERNMENT**

**GETTING BACK TO WORK
BY
SMELL FRESH ARIZONA, LLC.**

The Coronavirus (COVID-19) has presented our businesses and local governments with difficult challenges, not only for today, but for the foreseeable future.

The threat of the Coronavirus is not going away any time soon. Statistics for cases and deaths may taper off. The government may encourage people to go back to work. But the virus itself will remain a threat to our well-being for quite some time. So how do we return to a life of normalcy?

More specifically, how do we get people back to work and open our doors to the public safely, and responsibly?

We know we have to maintain social distancing and diligent cleaning practices.

There is a reason local and state governments have issued stay at home orders. There is a reason restaurants and other businesses have had to close their doors to the public. The fact is, social distancing and constant cleaning will still come up short when people try returning back to their normal routines, workspaces, and public spaces.

Long term... It is not practical to expect people to constantly remain 6 feet apart. It is not practical to clean every surface between every human contact. So what can you do to keep people safe at your business?

Smell Fresh Arizona, LLC. can help...

In addition to Level 1, 2, and 3 cleaning and disinfecting solutions, Smell Fresh Arizona offers Coronavirus disinfecting solutions that work between CDC recommended cleaning programs for businesses.

YOUR RESPONSIBILITY AS A BUSINESS OR BUILDING OPERATOR

To help contain the spread of the Coronavirus, owners and operators of commercial spaces have the responsibility to take precautionary measures, and mount an effective response if you believe or know a building has been exposed. Smell Fresh Arizona can help facilitate both precautionary measures, and effective responses to exposure.

ENGINEERED SOLUTIONS

We are not a cleaning or restoration service provider in the traditional sense. Smell Fresh Arizona was founded by an Engineer with a working background in Nuclear, Semiconductor, and Robotic Industries before entering the Restoration Industry. We understand the science behind how each of the various Coronavirus killing technologies work, and bring the very best of methods and technological solutions to your business.

Smell Fresh Arizona, LLC. is not a janitorial service provider, rather we compliment your staff's and janitorial cleaning programs. Our systems clean, between cleanings.

We are an IICRC Certified Business.

LEVEL 1, 2, AND 3 CLEANINGS

We only use EPA List-N Chemical Products and CDC recommended mechanical solutions to service Level 1, 2, and 3 cleanings:

Level 1 – Precautionary

If no known exposure, we can support once or twice daily disinfection cleanings.

Level 2 – Possible Exposure

If suspected exposure, a suspicion of an infected person entering the building, we perform a 10-foot down disinfection and deep-clean decontamination. In addition to manually wiping down all high contact surfaces, we fumigate and fog the space with powerful virus killing oxidizers. We further fog and disinfect the HVAC system.

Level 3 – Confirmed Exposure

If known exposure, a known infected person has entered the building, businesses should close off that area to people and implement a customized protocol to ensure a thorough and proper decontamination of that space. It is NOT recommended that untrained staff or janitorial services perform this work. Smell Fresh Arizona, LLC. has experienced decontamination staff, protocols, chemicals, and technologies to decontaminate any space. With our fumigation and fogging processes, we can't miss a spot, and we won't!

*** We are available during, before, or after your business hours to meet your needs.**

**** All of our disinfecting treatments include some combination of the following:**

Ozone	Quaternary Ammonium Chloride cleaners
Ultraviolet Light Radiation	Silane Quaternary Ammonium Chloride coatings
Hydroxyl Generators	Hydrogen Peroxide cleaners
Ion Generators	Titanium Dioxide Coatings

APPLIED THROUGH: **Fumigation** **Fogging** **Physical cleaning**

DISINFECTING TECHNOLOGIES BETWEEN CLEANINGS

Offer your employees, clients, and customers peace of mind.

Traditional disinfectants only disinfect at the time of application. They can kill a germ on a surface when its applied. Is it practical for your employees to wipe down every surface between each human contact? Every doorknob, handle, countertop, and keypad?

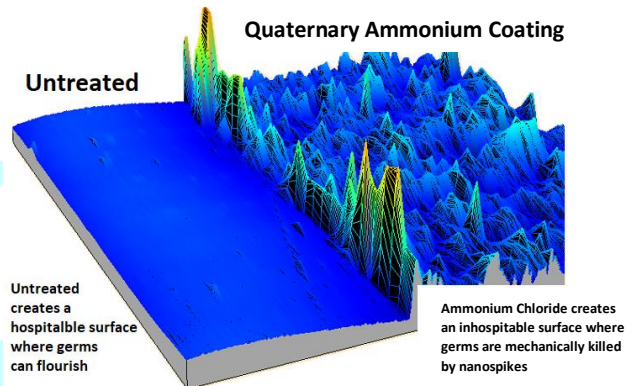

We offer solutions that disinfect between cleanings. These technologies are not meant to replace your CDC recommended cleaning program. They are intended to compliment your program. They are intended to keep people safe between cleanings.

We can apply durable disinfecting coatings and air purification systems with proven virus killing technology to any indoor space. These products work 24/7/365.

**Smell Fresh Arizona, LLC. has cleaning solutions that work on all surfaces, all the time...
...We can keep surfaces clean, between cleanings!**

DURABLE QUATERNARY AMMONIUM COATINGS

Our coatings use hospital-grade, quaternary antimicrobial technology to kill all microorganisms on contact, and are durable with a 90 day coverage warranty. General cleaning products only work at time of application. Our products work long after their initial application. We can coat office spaces, classrooms, kitchens, dining areas, conference rooms, countertops, doorknobs, keypads, and more... any surface deemed high use, high traffic, and high risk for virus transfer to your employees and customers. You can rely on employees to clean every surface between every human contact, or we can coat these surfaces once every 90 days to kill viruses and other germs on contact!

Is it safe for people and pets? It is so safe, that it is rated by the National Sanitation Foundation as a “no rinse required on food contact surfaces” sanitizer, and EPA registered.

AIR PURIFICATION SYSTEMS

Our systems install in HVAC systems, are virtually maintenance free, and work 24/7/365 to kill viruses and other germs with three proven virus killing technologies in one device:

- **Photocatalytic Oxidation Technology creates hydroperoxide radicals – proven virus killers!**
- **UV-C lamps – proven virus killers!**
- **Negative ion generators – proven virus killers!**

Testing has shown a 99% kill rate on germs in less than 3 feet from a sneeze!

Your employees can't disinfect a door handle between every human contact. We can!

With the combination of our Air Purification Systems that can kill airborne germs, and durable coatings that can keep surfaces disinfected in between cleaning routines, we can help you protect your employees and customers 24/7/365.

WHAT'S THE COST?

The average daily cost of our systems work out to be substantially less than most other cleaning programs when you figure in the daily costs of cleaning products and labor. One or both of our technologies in your business may be a lot less than you think.

We can customize a plan for you based on your business size, type, human traffic, and budget. Call today to schedule a consultation.

ABOUT SMELL FRESH ARIZONA, LLC.

Smell Fresh Arizona, LLC. is an Indoor Air Quality service provider. Over the years, we have become experts in sterilizing environments by eliminating Volatile Organic Compounds and microorganisms. We have proven, decades-old, germ and Coronavirus killing technology at our disposal. Let us help you keep your employees and the general public safe. Thank you for your consideration!
